Suraj Lohia

Mumbai, India | surajlohia2@gmail.com | LinkedIn | GitHub

Summary

Computer Science graduate with a strong interest in cybersecurity and a hands-on approach to learning. Enjoys breaking problems down, building things to understand how they work, and picking up new tools and technologies quickly. Curious, adaptable and comfortable working in a team, with a drive to keep learning, take on new challenges and grow while contributing to real work.

Technical Skills

Languages: Python, JavaScript, Solidity, HTML/CSS
Security: Cryptography, Web Exploitation, Reverse Engineering, Digital Forensics, Steganography, OSINT
ML & Systems: scikit-learn, Random Forest, psutil, WMI, Windows Event Logs
Blockchain & Tools: Web3.js, MetaMask, Remix IDE, Ganache, Git/GitHub

Projects

Self-Healing Cybersecurity System (ML-Based IDS) | *Python, scikit-learn, Random Forest, psutil, WMI* 2026

- Built a Windows-based intrusion detection system that monitors CPU, memory, processes, network activity and login events in real time using psutil and WMI, with a live dashboard and event logging.
- Trained a Random Forest classifier (100 trees) on the UNSW-NB15 dataset with an 80:20 train-test split, achieving 94.51% accuracy; used label encoding, normalization and feature-importance-based selection.
- Implemented automated self-healing responses: terminating suspicious processes, blocking malicious IPs, updating firewall rules and raising alerts. Team project; co-authored the project report.

EduCertify: Blockchain Document Verifier | *Solidity, Web3.js, JavaScript, MetaMask* 2025

- Built a decentralized app to store and verify the authenticity of student documents using SHA-256 hashes recorded on an Ethereum-compatible blockchain.
- Wrote a Solidity smart contract with admin-only upload access control and a public verification function that checks a document hash against a student's address.
- Computed hashes in the browser with the Web Crypto API and integrated MetaMask via Web3.js; tested on a local Ganache network and Remix IDE.

SafetyApp | *Mobile App, Firebase, Google Maps API* Jul – Oct 2024

- Developed a prototype mobile safety app that lets users send instant emergency alerts to authorities, with dedicated buttons for different emergency situations.
- Integrated the Google Maps API to share the user's live location in real time with the respective department when an alert is sent.
- Designed a two-app system: one app for users to trigger alerts and one for departments to receive and respond to them, with Firebase Authentication. Team project (4 members).

Education

SIES Graduate School of Technology Navi Mumbai, India
B.E. Computer Science & Engineering (IoT & Cybersecurity incl. Blockchain Technology) *2022 – 2026*

DAV Public School Nerul, Navi Mumbai
Class XII (CBSE), 85.6% *2022*

DAV Public School Nerul, Navi Mumbai
Class X (CBSE), 93.6% *2020*

CTF & Achievements

X'ploitathon CTF, CSE Department, SIES GST 2025

- Competed in a Capture-the-Flag cybersecurity contest, solving time-bound challenges in cryptography, steganography, reverse engineering, web exploitation, OSINT and forensics.
